

Work Opportunities in Japan Website

Overview

This website provides information about job opportunities in Japan. It includes a homepage, job listings page, and contact page. Users can explore job listings, search for specific jobs, and get in touch with the company for inquiries.

Technologies Used

- **HTML:** For structuring the webpages.
- **CSS:** For styling the webpages.
- **JavaScript:** For dynamic behavior, interactivity, and handling job data.
- **Google Fonts:** Montserrat and Rubik fonts are used for text styling.

Files and Directories

- **index.html:** Homepage displaying general information and links to other pages.
- **job-listings.html:** Displays job listings with search functionality.
- **contact.html:** Provides contact information.
- **style.css:** Stylesheet for styling the webpages.
- **main.js:** JavaScript file for handling job data, search functionality, language toggling, and dynamic content.

Structure and Features

Homepage (**index.html**)

- **Header:** Navigation bar with links to Home, Job Listings, About Us, and Contact pages.
- **Home Content:** Brief introduction and a button to navigate to job listings.

Job Listings Page (`job-listings.html`)

- **Jobs List Container:** Displays the number of jobs, a search input, and language toggle.
- **Job Cards:** Each job listing includes an image, title, details, open positions, and a "More Details" button.
- **Search Functionality:** Allows users to search for specific jobs by typing in the search input.
- **Language Toggler:** Toggles between English and Japanese content.

Contact Page (`contact.html`)

- **Contact Content:** Contact details including email, phone, and address.
- **Footer:** Language toggle button (日本語/ENG).

Styling

- **Fonts:** Montserrat and Rubik fonts from Google Fonts are used for text styling.
- **CSS:** External stylesheet (`style.css`) is used for styling the webpages.
- **Background:** Parallax background effect with a fixed background image on the body.

JavaScript (`main.js`)

- **Simulated Job Data:** Array of job objects with titles, locations, and types.
- **Display Jobs:** Function to display job listings dynamically based on the job data.
- **Search Functionality:** Filters job listings based on user input in the search bar.
- **Language Toggler:** Toggles content between English and Japanese.

- **Placeholder Apply Button:** Placeholder functionality for "Apply Now" button.
- **Language Switching:** Fetches language data from `lang.php` and redirects to the appropriate language page.

How to Use

1. Clone the repository or download the files.
2. Open `index.html` in a web browser to view the homepage.
3. Navigate through the website using the navigation links.
4. Click on "View Jobs" on the homepage to see job listings.
5. Use the search input on the job listings page to filter jobs by title, location, or type.
6. Toggle between English and Japanese content using the language toggle button.

Future Improvements

- Add more details to the job listings, such as salary and requirements.
- Implement pagination for better navigation through job listings.
- Enhance search functionality with more advanced features.
- Add an "About Us" page to provide more information about the company and its mission.
